Education

Pandit Deendayal Energy University

Bachelor of Technology in Computer Science, CGPA: 8.28

Gandhinagar, India

Oct. 2022 – Present

Experience

Software Engineer

Jan 2026 – Present

BLITZ INFOCOM ([blitzinfocom](#))

- Engineered AI-powered resume analysis and job matching workflows using **Ollama**, **Google Gemini**, and **Groq APIs**, enabling automated candidate evaluation and recommendation generation.
- Designed and implemented semantic search pipelines leveraging vector embeddings and similarity scoring algorithms to improve resume-to-job matching accuracy.
- Integrated external job aggregation services through **RapidAPI** and developed backend services for scalable job retrieval and processing.
- Built RESTful APIs and backend modules for resume parsing, ATS scoring, keyword extraction, and candidate profile generation using modern full-stack technologies.
- Collaborated on architecture, feature development, testing, and deployment of a production-ready AI recruitment platform serving end-to-end career optimization workflows.

Full Stack Intern

May 2025 – Jul 2025

TSC ([thespecialcharacter](#))

- Built **SportsWalla**, a sports venue booking platform with calendar integration using **Next.js**, **TypeScript**, and **Tailwind CSS**, streamlining booking and scheduling workflows.
- Migrated and enhanced the e-commerce platform for **Yogateria** using **Medusa.js**, **Payload CMS**, and **PostgreSQL**, improving scalability, content management, and user experience.
- Collaborated with cross-functional teams to develop responsive UI components, integrate APIs, and optimize application performance across multiple projects.

Projects

Career Lens - AI Powered Resume Intelligence Platform

[\[Live Demo\]](#)

Next.js, TypeScript, Python, Ollama, Gemini API, Groq API, RapidAPI

- Built an end-to-end **AI-powered job matching platform** that parses resumes, extracts candidate insights, and recommends relevant job opportunities based on skills, experience, and education.
- Integrated **RapidAPI** job services to aggregate and retrieve job listings dynamically from multiple sources, enabling personalized job discovery.
- Implemented semantic matching using locally generated **all-mpnet-base-v2 embeddings (768 dimensions)** and vector similarity scoring to compare resume content against job descriptions with high contextual accuracy.
- Developed an **AI Resume Tailoring Engine** leveraging **Gemini**, **Groq**, and **Ollama** to optimize resumes for specific job descriptions while preserving the original format, structure, and professional styling.
- Designed a complete job application tracking workflow with resume version management, application status monitoring, and AI-driven recommendations, reducing manual job search effort and improving application quality.

SiteScan - Production-Grade URL Audit Service

[\[GitHub\]](#)

Node.js, TypeScript, Express.js, Zod, Jest

- Built a backend URL audit service with layered production safeguards - **SSRF protection**, per-instance **concurrency limiting** with bounded queueing, and sliding-window **rate limiting**.
- Architected swappable interfaces (**CacheProvider**, rate-limit store) enabling a move from in-memory to **Redis**-backed caching at scale via config alone, with a Redis provider already implemented and tested.
- Authored a scale-out design for **10,000 audits/day at 500-concurrent bursts**, covering cache-stampede coalescing, per-host circuit breakers, and horizontal autoscaling.
- Achieved **80%+ test coverage** (Jest, Supertest) with structured request logging, **/metrics** observability, and an automated rollback plan gated on error-rate thresholds via CI.

ShipDoc AI - Document Q&A & Extraction for TMS

[\[Live Demo\]](#)

Next.js, Python, FastAPI, MongoDB, Groq API, fastembed

- Built a full-stack **AI document intelligence platform** for logistics TMS workflows, enabling grounded Q&A and structured data extraction from Rate Confirmations, BOLs, and invoices.
- Engineered a **hybrid retrieval pipeline** combining local **MiniLM embeddings (fastembed/ONNX)** with lexical term matching, improving precision over pure cosine similarity.
- Designed a **two-layer guardrail system** (similarity gate + blended confidence scoring) to suppress hallucinated answers, empirically calibrated against real sample documents.
- Optimized deployment on **Render's free tier** by migrating from PyTorch to **fastembed (ONNX Runtime)**, cutting cold-start time from 50s+ to **6s**.

Client Projects

Blitz Infocom | *Next.js, TypeScript, Tailwind CSS* | [Live Website](#)

- Designed and developed the official company website for Blitz Infocom, an enterprise AI software development and IT staffing firm, showcasing services, engineering capabilities, and global office presence.

Onyx Technologies LLC | *Next.js, TypeScript, Tailwind CSS* | [Live Website](#)

- Designed and developed the official staffing and manpower solutions website that connects businesses with skilled workforce resources and supports recruitment and staffing operations for employers and job seekers.

Dev Tours and Travel | *Next.js, TypeScript, Tailwind CSS* | [Live Website](#)

- Built a full-stack tour and travel platform enabling users to browse destinations, view curated travel packages, and explore itineraries through a responsive, content-rich booking experience.

Technical Skills

Programming Languages: Java, Python, C/C++, JavaScript, TypeScript, SQL

Frontend Technologies: React.js, Next.js, HTML5, CSS3, Tailwind CSS

Backend Technologies: Node.js, Express.js, FastAPI, REST APIs, JWT Authentication

AI & Machine Learning: Ollama, Google Gemini API, Groq API, Prompt Engineering, Vector Embeddings, Semantic Search, RAG Pipelines, LLM Applications

Databases & CMS: PostgreSQL, MongoDB, Redis, Firebase, Payload CMS, Medusa.js

Developer Tools: Git, GitHub, Docker, VS Code, PyCharm, IntelliJ IDEA, Eclipse

Cloud & Deployment: Vercel, Render

Core Computer Science: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems

Achievements

[LeetCode Profile](#)

- Solved **300+ Data Structures and Algorithms** problems across LeetCode, code360, and other competitive programming platforms.
- Strong understanding of **Arrays, Linked Lists, Dynamic Programming, Greedy Algorithms, Recursion, and Hashing**.
- Regularly practiced algorithmic problem solving focusing on time and space complexity optimization.
